Practical 2: Photo Editing and Basic Retouching

Objective: To perform basic photo editing, cropping, color correction, and spot removal using Photoshop retouching tools.

Tools Used: Crop Tool, Spot Healing Brush Tool, Healing Brush Tool, Clone Stamp Tool, Brightness/Contrast, Color Balance.

My Step-by-Step Procedure:

1. I opened a standard photograph inside Photoshop to practice retouching.
2. I selected the Crop Tool to trim unwanted borders and straighten the horizon line of the image.
3. I opened Image > Adjustments > Brightness/Contrast to improve the lighting and overall exposure.
4. I used Color Balance and Hue/Saturation adjustments to correct the color tones and make the photo look natural.
5. I zoomed in closely on the image and used the Spot Healing Brush Tool and Healing Brush Tool to clean up blemishes and unwanted spots.
6. I also used the Clone Stamp Tool with Alt-sampling where I needed precise texture copying.
7. I saved my working project as a PSD file.
8. I exported the final edited version as a JPG and also prepared a side-by-side comparison image showing the before and after states.
