Practical 4: Advanced Selection, Color Correction and Adjustment Layers

Objective: To practice advanced selection techniques and non-destructive color correction using adjustment layers and masks.

Tools Used: Quick Selection Tool, Magic Wand, Select and Mask, Adjustment Layers (Hue/Saturation, Levels).

My Step-by-Step Procedure:

1. I opened a photograph with a clear main subject in Photoshop.
2. I used the Quick Selection Tool to carefully outline the main subject.
3. I clicked on 'Select and Mask' in the top options bar to refine the selection edges so they looked clean and sharp.
4. I created a new Hue/Saturation Adjustment Layer from the Layers Panel.
5. Because I had an active selection, Photoshop automatically applied it as a Layer Mask, restricting the color changes only to the selected area.
6. I tweaked the sliders to change the color appearance of the subject without altering the original pixels permanently.
7. I saved the project as a PSD file and exported the final image as a JPG.
